What's a Duck?

Duck is the common name for numerous species of waterfowl birds. Ducks are generally smaller and shorter-necked than swans and geese, which are members of the same family. Divided among several subfamilies, they are a form taxon; they do not represent a monophyletic group, since swans and geese are not considered ducks. Ducks are mostly aquatic birds, and may be found in both fresh water and sea water.

Conclusion

So based on all the information and arguments provided in this presentation, it is obvious the superiority of ducks among all the leaving creatures on the Earth. So with no doubts you should get yourself our own duck and to keep it as a pet to be able to witness its beauty and majesty every day. (It is obviously a very wise investment of time and money)
